

ProductsApi Documentation

The API manages products so that the department can create, update and delete products.

Methods

- GetProducts
- AddProduct
- UpdateProduct
- DeleteProduct

Status codes

This API uses HTTP status codes to communicate with the API consumer.

- 200 OK - Response to a successful GET, PUT or DELETE.
- 201 Created - Response to a POST that results in a creation.
- 400 Bad Request - Malformed request; request body validation errors.
- 404 Not Found - When a non-existent resource(ProductId) is requested.
- 500 Server Error - Something went wrong on the API server.

Methods:

GetProducts

This method will return all the products.

GET /api/Products

Parameters: No Parameters

Server Response Example:

<u>Code</u>	<u>Response Body</u>
200	<pre>[{ "id": "0c3762f3-7053-4876-a312-4ab8302df811", "name": "Razer", "description": "Gaming Headsets" }, { "id": "d0a34125-afb7-4313-ab15-8f3e244957d3", "name": "Apple", "description": "Apple Iphone" }, { "id": "cb13339d-b3cc-4c49-88c0-e2cfe112a2e6", "name": "Dell", "description": "Dell Laptop" }]</pre>

AddProduct

This method will add a product.
